WORK EXPERIENCE

INTELLITECT

Software Engineer III

Spokane, WA
Jul 2023 – Present

AI Textbook Indexing System for Essential C#

- Architected and delivered an AI-powered semantic indexing platform using C#, Microsoft Semantic Kernel, PostgreSQL vector embeddings, and custom document parsing to generate publisher-quality textbook indexes.
- Replaced a four-week manual indexing process with an automated AI workflow achieving approximately 85% validated accuracy, reducing the process to a single operator.
- Delivered a production system adopted for the official *Essential C#* publication, demonstrating enterprise-ready AI content generation.

Microsoft 365 Graph Connectors & Copilot Studio Training

- Architected a custom Microsoft Graph Sync Connector to integrate to On-Premise BitBucket repository files and integrated other enterprise knowledge systems like Jira and Confluence into 365 to enable greater context and visibility for Copilot.
- Led enterprise Copilot Studio and Power Automate workshops for executive stakeholders and engineering teams, establishing best practices for AI automation, governance, and data protection including GDPR compliance
- Established enterprise practices for MCP (Model Context Protocol) connections to Copilot Studio Agents for developer teams leveraging Azure APIM and .NET Aspire to provide logging, scaling, security-first MCP servers

.NET MAUI Banking Application

- Owned and drove full-cycle feature development on a production .NET MAUI (Multi-platform App UI - Microsoft's cross-platform native mobile framework for C# and .NET) application serving 12+ credit unions and 2,500+ end users across the financial services industry
- Architected the modernization of a legacy iframe-based bill payment experience into a polished, native cross-platform mobile UI integrated with Jack Henry SOAP APIs - enabling enterprise-grade digital banking workflows for credit union customers
- Elevated usability and reliability across high-frequency financial workflows - including real-time fund transfers, personal finance management, and bill payment processing - directly improving end-user satisfaction and feature adoption

AWS-Powered PDF Rendering System

- Engineered and productionized an enterprise-scale, event-driven distributed PDF rendering pipeline on Amazon Web Services - leveraging AWS Lambda (serverless compute), Amazon SQS (Simple Queue Service message queuing), Amazon S3 (object storage), and Amazon RDS (relational database service) - processing over 100,000 XML-based billing documents in under 12 minutes
- Owned the PDF generation layer using QuestPDF (open-source .NET document generation library), diagnosing and resolving critical rendering defects to deliver consistent, pixel-accurate, high-quality document output at enterprise throughput

SWIRE COCA-COLA

Application Developer Intern

Draper, UT
May 2022 – Feb 2023

- Engineered a full-stack internal observability and monitoring platform using Blazor (C#-powered component-based web UI framework for .NET) and ASP.NET Core REST APIs - delivering centralized root cause analysis and system health visibility across 30+ disparate legacy financial and inventory applications, enabling faster incident response and reducing mean time to resolution
- Led a ground-up rewrite of a mission-critical HR employee onboarding system, achieving a 40% improvement in runtime performance while substantially increasing system stability, reliability, and long-term maintainability

SKILLS

Certifications: Azure AI Engineer (AI-102), Azure Developer (AZ-204)

Languages & Frameworks: C#, .NET, ASP.NET Core, Angular, TypeScript, SQL, React, Python

Cloud & Infrastructure: .NET Aspire, Microsoft Azure, Azure Functions, Amazon Web Services (AWS), Terraform, Docker, AWS Lambda, Amazon S3, Amazon SQS, Azure APIM

AI & Machine Learning: MCP (Model Context Protocol), Microsoft Copilot Studio, Semantic Kernel (Microsoft AI Orchestration SDK), Azure OpenAI Service, Agentic Workflows, Agent Framework, LLM Integration, ML.NET, ONNX Runtime, Microsoft 365 Graph Connectors

Architecture & Patterns: GoF Design Patterns, Microservices, Event-Driven Architecture, Clean Architecture, SOLID Principles, RESTful API Design, Test Driven Development

EDUCATION

BRIGHAM YOUNG UNIVERSITY

Bachelor of Science
Major in Computer Science

Provo, UT
May 2023
