WORK EXPERIENCE

INTELLITECT

Software Engineer II

Spokane, WA
Jul 2023 – Present

AI Textbook Indexing System for Essential C#

- Designed and implemented an AI-powered indexing system using a custom C# parser for Word documents leveraging Semantic Kernel for embedding generation
- Reduced a 4-week manual indexing process by a 6-person team to a repeatable AI-drive process, achieving around 85% accuracy with publisher-approved validation
- Delivered a production-ready system trusted for Essential C#'s real-world textbook publishing

.NET Maui Banking Application

- Owned feature development for a production .NET Maui app used by 8+ credit unions and around 600 users
- Replaced a legacy iframe-based bill payment experience with a modern native UI integrated with Jack Henry SOAP APIs
- Improved usability and reliability for high-frequency financial workflows including transfers, personal finance management, and bill payments

AWS-Powered PDF Rendering System

- Finalized and productionized a distributed PDF rendering pipeline built on Amazon Web Services (Lambda, SQS, S3, RDS) for processing XML-based billing data
- Owned the PDF generation component, resolving rendering issues and improving consistency of output
- Supported the system in production, maintaining performance capable of processing 100,000+ documents in under 12 minutes

MCP Enablement and Governance

- Defined best practices for MCP server usage for a Fortune 500 client and provided templates and working examples of complex, enterprise authentication patterns and database connections, reducing onboarding time for developers
- Created example MCP servers to streamline marketing functions such as social media posting, event planning and graphic design to reduce overhead for content generation

SWIRE COCA-COLA

Application Developer Intern

Draper, UT
May 2022 – Feb 2023

- Developed Azure-based .NET applications to improve observability into mission-critical business processes
- Built a Blazor monitoring tool for legacy systems, leading to internship extension through demonstrated product impact
- Rewrote a critical HR onboarding process, improving runtime performance by 40% and increasing system stability
- Collaborated in Agile environments and contributed to cross-functional delivery processes

PROJECTS

SWC Online Battler (swc.daocodes.com)

April 2026

- Developed a full-stack online card game platform using .NET Aspire, Angular, ASP.NET Core, and PostgreSQL
- Implemented real-time multiplayer gameplay and state synchronization across clients using SignalR
- Designed backend services for game logic, persistence, and live communication

BreakPoint.AI

Jan 2026

- Built an AI-powered tennis coaching system using .NET Aspire and ML.NET models to present at Spokane .NET Conf
- Designed an event-driven processing pipeline using Azure Functions and ONNX models for scalable AI workloads

Dao.DotNet.Templates

Nov 2025

- Created reusable .NET project templates focused on modern architecture patterns and AI integration
- Accelerates development by standardizing project setup, infrastructure, and best practices

SKILLS

Languages & Frameworks: C#, .NET, ASP.NET Core, Angular, SQL, TypeScript, React, Python

Cloud & Infrastructure: Azure (Functions, Container Apps, Service Bus, App Registrations), AWS (Lambdas, SQS, S3, RDS, CloudWatch)

AI: Semantic Kernel, Agent Framework, MCPs, ML.NET, ONXX, Azure OpenAI, Agentic Workflows, Copilot Studio

Certifications: Azure AI Engineer (AZ-102), Azure Developer (AZ-204)

EDUCATION

BRIGHAM YOUNG UNIVERSITY

Bachelor of Science

Major in Computer Science

Provo, UT

May 2023
